

XM Radio is a service that I pay a monthly subscription charge for the use of. Having a reliable and accessable channel to give Instant Traffic and Weather reports is extremely beneficial to those of us who drive in some of the worse traffic in the nation. Having a dedicated channel that you know will give you instant reports and not having to sit through DJ chatter wondering when they are going to give a traffic update is less aggravating when sitting in a dead stand still on an interstate under the hot sun in southern humidity. Please let us get our money's worth on our satallite radio and reject the NAB's petition 04-160.
